THREE
WITNESSES.
THREE DEATHS.
ONE TRUTH THAT
COULD DESTROY
AN EMPIRE.

THE DRUG INSPECTOR

A NOVEL OF MURDER, MANIPULATION,
— AND THE PRICE OF TRUTH

A BOOK BY

DEVANSSH MEHTA

The Drug Inspector

A Psychological Triple-Murder Thriller about Power, Corruption, and the Dark Chemistry of the Human Mind

A Novel by Devansh Mehta

Prologue

The Night of Silence

The rain fell relentlessly over the industrial outskirts of **New Jersey**, blurring the neon lights of pharmaceutical warehouses and laboratories.

Inside a dimly lit government laboratory office, **Drug Inspector Adrian Clarke** sat motionless at his desk.

The file before him was thick.

Too thick.

It carried the logo of one of the largest pharmaceutical companies in America—**Helixion Biotech**.

But something about the numbers disturbed him.

The clinical trial mortality rate was far higher than what had been reported to the regulatory authority.

Someone had manipulated the data.

Someone had buried deaths.

Adrian leaned back slowly.

Outside, thunder echoed.

Inside his mind, a far darker storm was gathering.

Because he knew one thing:

If the truth came out, **three powerful people would fall.**

And powerful people never fall quietly.

Chapter 1

The Inspector

Adrian Clarke was not a typical government officer.

He was precise.

Observant.

Uncomfortably calm.

As a **Senior Drug Inspector at the Federal Pharmaceutical Regulatory Authority**, his job was to investigate violations in drug manufacturing and clinical trials.

Most inspectors signed reports.

Adrian investigated truth.

And truth often carried consequences.

At thirty-eight, he had already shut down several illegal pharmaceutical operations.

But success had its price.

Pharmaceutical corporations hated him.

Lobbyists feared him.

Politicians avoided him.

And criminals watched him.

Yet Adrian remained indifferent.

Because to him, regulation was not bureaucracy.

It was a **moral responsibility**.

Drugs could heal.

But drugs could also kill.

And someone had to guard that line.

Chapter 2

The First Complaint

The case began with a complaint.

Anonymous.

Three pages long.

It alleged that **Helixion Biotech** had hidden deaths during clinical trials of a new neurological drug called **Neurovalis**.

The complaint ended with a chilling sentence:

"Three people already know the truth.

Two will die.

One will survive."

Adrian read the line twice.

Then he opened a new investigation.

He did not yet realize that this case would become the most dangerous investigation of his career.

Chapter 3

Helixion Biotech

Helixion Biotech stood like a fortress of glass and steel.

Inside were brilliant scientists.

Billions of dollars in research.

And secrets worth killing for.

Adrian arrived unannounced.

The CEO greeted him with an artificial smile.

Dr. Victor Halberg.

A man known for his brilliance and ruthlessness.

Victor's voice was calm.

"Inspector Clarke, our company complies with every regulation."

Adrian replied quietly.

"Then you won't mind an inspection."

Victor's eyes hardened slightly.

Because inspections often revealed truths that companies preferred to bury.

Chapter 4

The Data

The clinical trial records were perfect.

Too perfect.

Adrian noticed something unusual.

The mortality rate was exactly **0.0%**.

No serious adverse events.

No neurological complications.

No deaths.

That was statistically impossible.

Every clinical trial carries risk.

Every drug carries uncertainty.

Perfection in data often means one thing.

Manipulation.

Chapter 5

The Whistleblower

That night Adrian received a phone call.

A trembling voice spoke.

“My name is **Dr. Emily Carter**. I worked on Neurovalis.”

She paused.

“Three patients died during the trials.”

Adrian’s heart slowed.

“Why wasn’t it reported?”

Emily whispered.

“Because the company erased the data.”

Chapter 6

The First Death

Two days later, Emily Carter was found dead.

Official cause:

Suicide.

Adrian did not believe it.

Her apartment showed signs of struggle.

Her laptop was missing.

Someone had silenced the whistleblower.

The investigation had now crossed a line.

This was no longer about regulatory violations.

This was **murder**.

Chapter 7

The Second Witness

Another scientist emerged.

Dr. Lucas Grant.

He confirmed Emily's claims.

But Lucas seemed terrified.

He repeatedly checked the windows during their meeting.

"They are watching us," he said.

Adrian asked calmly.

"Who?"

Lucas whispered:

"Helixion."

Chapter 8

The Second Death

Three nights later, Lucas Grant was killed in a car accident.

His car brakes had failed.

Police ruled it an accident.

Adrian knew better.

Two witnesses were now dead.

The pattern was becoming clear.

Someone was eliminating anyone connected to the truth.

Chapter 9

Psychological Shadows

Adrian began studying Helixion's leadership.

Victor Halberg.

Chief scientist **Dr. Nathan Brooks**.

Legal director **Sophia Caldwell**.

Three powerful figures.

Three individuals who could manipulate data.

Three individuals who could silence witnesses.

And somewhere among them...

was a killer.

Chapter 10

The Secret Laboratory

Adrian discovered an unregistered research facility owned by Helixion.

Inside were experimental drug batches.

Some labeled **Neurovalis Prototype**.

But others had strange codes.

This was not just a drug.

This was something more dangerous.
